Missing Authentication Vulnerability in Esri Portal for ArcGIS

Missing Authentication

Unauthenticated Attacker

CIA Compromise

Patch Available

The Cybersecurity Integration Center (CSIC) has become aware of a critically rated vulnerability that can impact ESRI Portal for ArcGIS. CVE-2026-13019 is a missing authentication vulnerability that carries a CVSS 3.1 score of 9.8.¹

CVE-2026-13019 is a vulnerability that involves a missing authentication for critical function. It allows an unauthenticated remote attacker to bypass authentication mechanisms to access an unprotected API. Given that ArcGIS portal is a public facing service and plays a significant role as a GIS system portal and API gateway, CVE-2026-13019 presents major data and system integrity concerns. Successful exploitation allows the attacker to read and modify sensitive data, significantly compromising the target system's data confidentiality, system integrity, and product availability.²

Esri has acknowledged these vulnerabilities and have issued an update to their June security bulletin that includes a patch and patch notes.³

The Cal-CSIC recommends following Esri's updated guidance as soon as possible. For additional patching details for CVE-2026-13019, please use this link:
