

HELP SHAPE THE 2026 CALIFORNIA ADAPTATION PLANNING GUIDE

The California Adaptation Planning Guide (APG) was first developed in 2012 to help local governments plan for hazards intensified by climate change.

As climate science, state policy, and local practices continue to evolve, the APG is being updated to include the latest information, tools, and examples that support communities, tribal nations, regional and NGOs with their planning needs, in building resilience across California.

The 2026 APG will be a practical, action-oriented resource designed to support local, regional, and tribal entities and organizations coordinate adaptation and mitigation planning under natural hazards and a changing climate.

This update is an opportunity to ensure the APG reflects on-the-ground needs, local experiences, and lessons learned from communities statewide. Your insights will help make the guide more relevant, useful, and effective for all who use it.

SHARE YOUR INPUT

**Your perspective is essential.
Please take a few minutes to complete
our short survey and share what would
make the APG most valuable for your
community.**
